V.E.Q.  
ALLERGOLOGIA  
Ciclo 2015

- 12 campioni di sieri liofili di origine umana
- Valutazione IgE specifiche per alimenti e inalanti
- Valutazione IgE totali

# Centri partecipanti per Regione

**126 Laboratori Ciclo 2015**

-3 laboratori rispetto al 2014

**129 Laboratori Ciclo 2014**

**63 Laboratori Ciclo 2009**

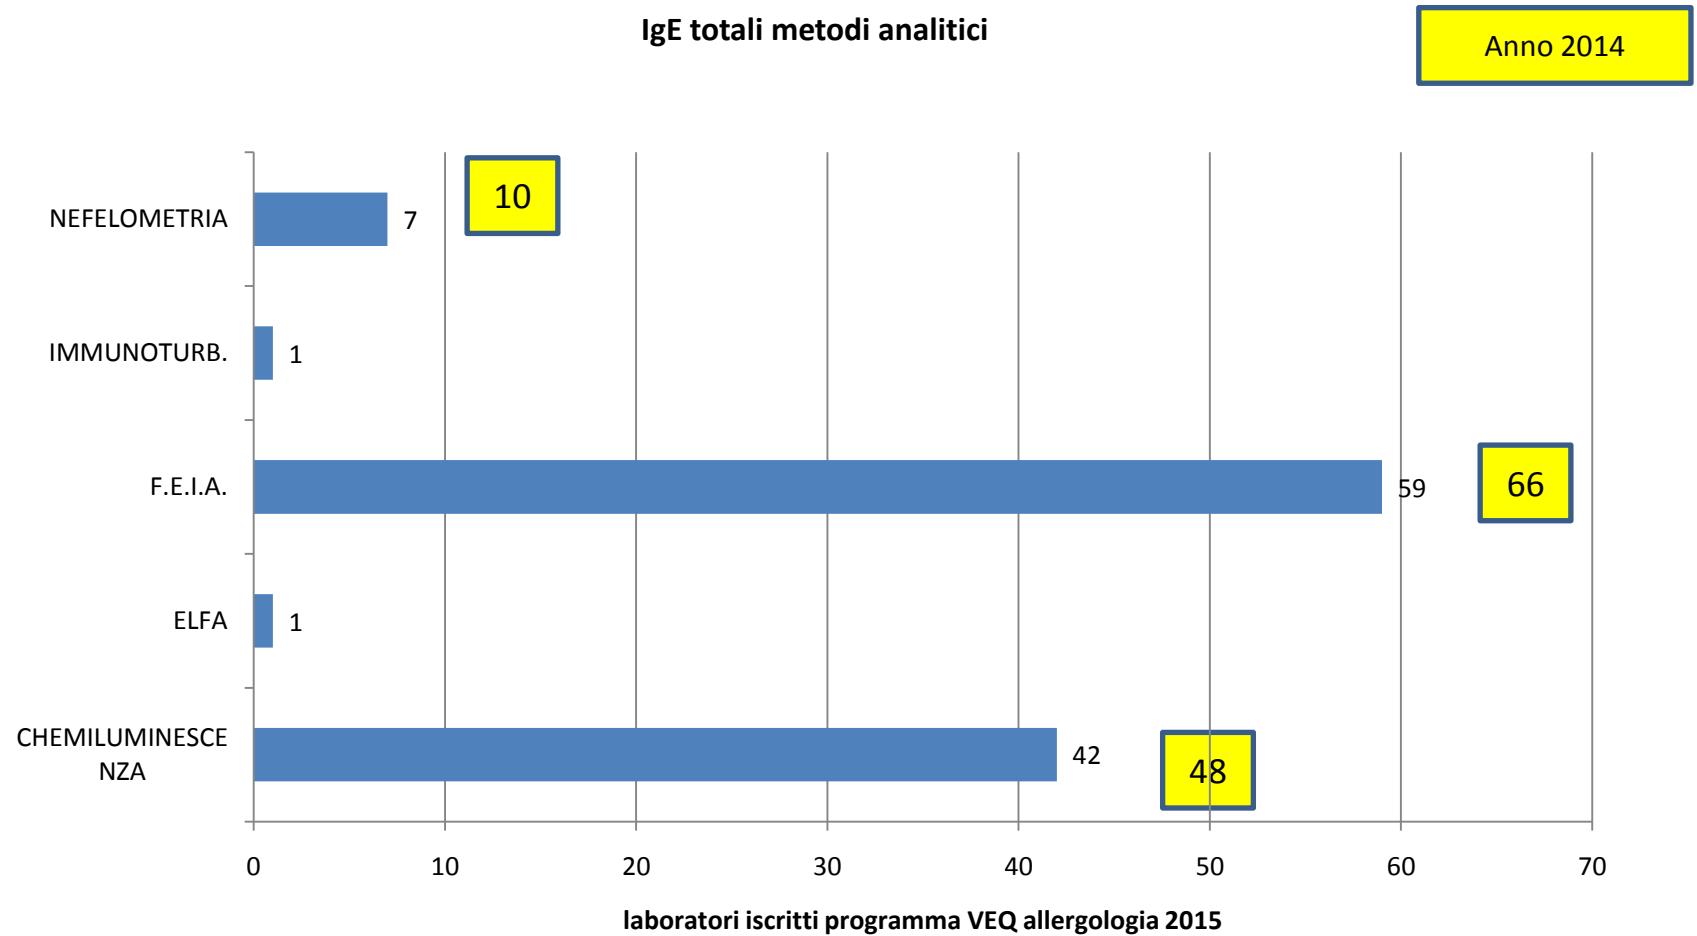

# 21 Allergeni dosati nel ciclo 2015

10 alimenti + 11 inalanti

Forfora di cavallo **non** presente nel 2015 rispetto al 2014

# IgE Totali (2015) - metodi analitici

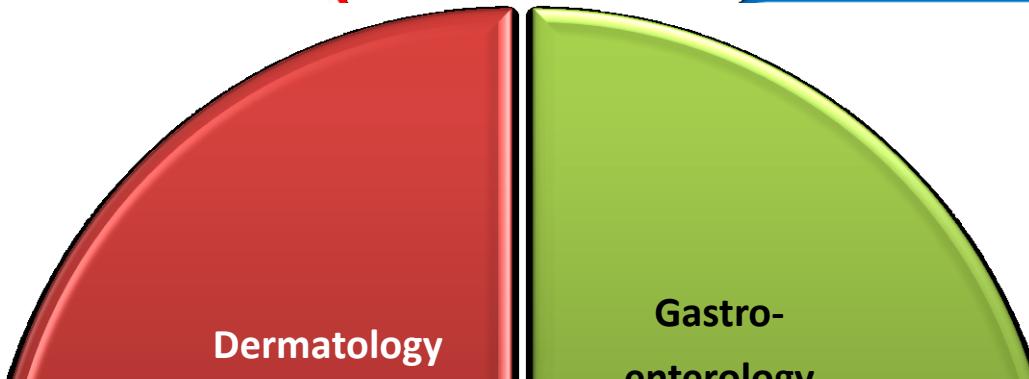

# IgE Specifiche (2015) - metodi analitici

Anno 2014

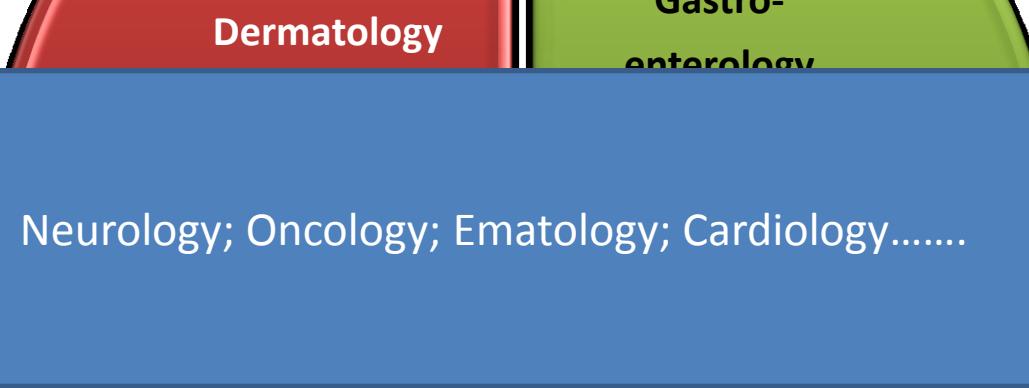

# **Immunogenicità dei farmaci biologici**

- Infliximab
- Adalimumab
- Etanercept
- Omalizumab

iximab  
alimumab  
limumab  
olizumab

Allergy  
Pneumology

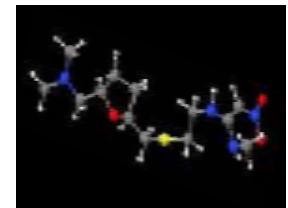

- Omalizumab
- Mepolizumab
- Benralizumab
- Reslizumab
- .....

Rheumatology

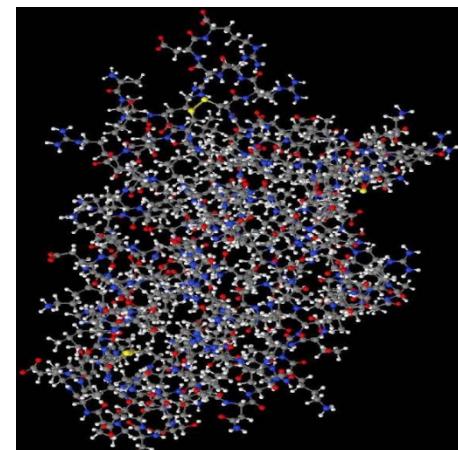

- ib  
ept  
mab
- Abatacept
  - Anakinra.....

# Farmaci biologici: perché sono immunogenici ?

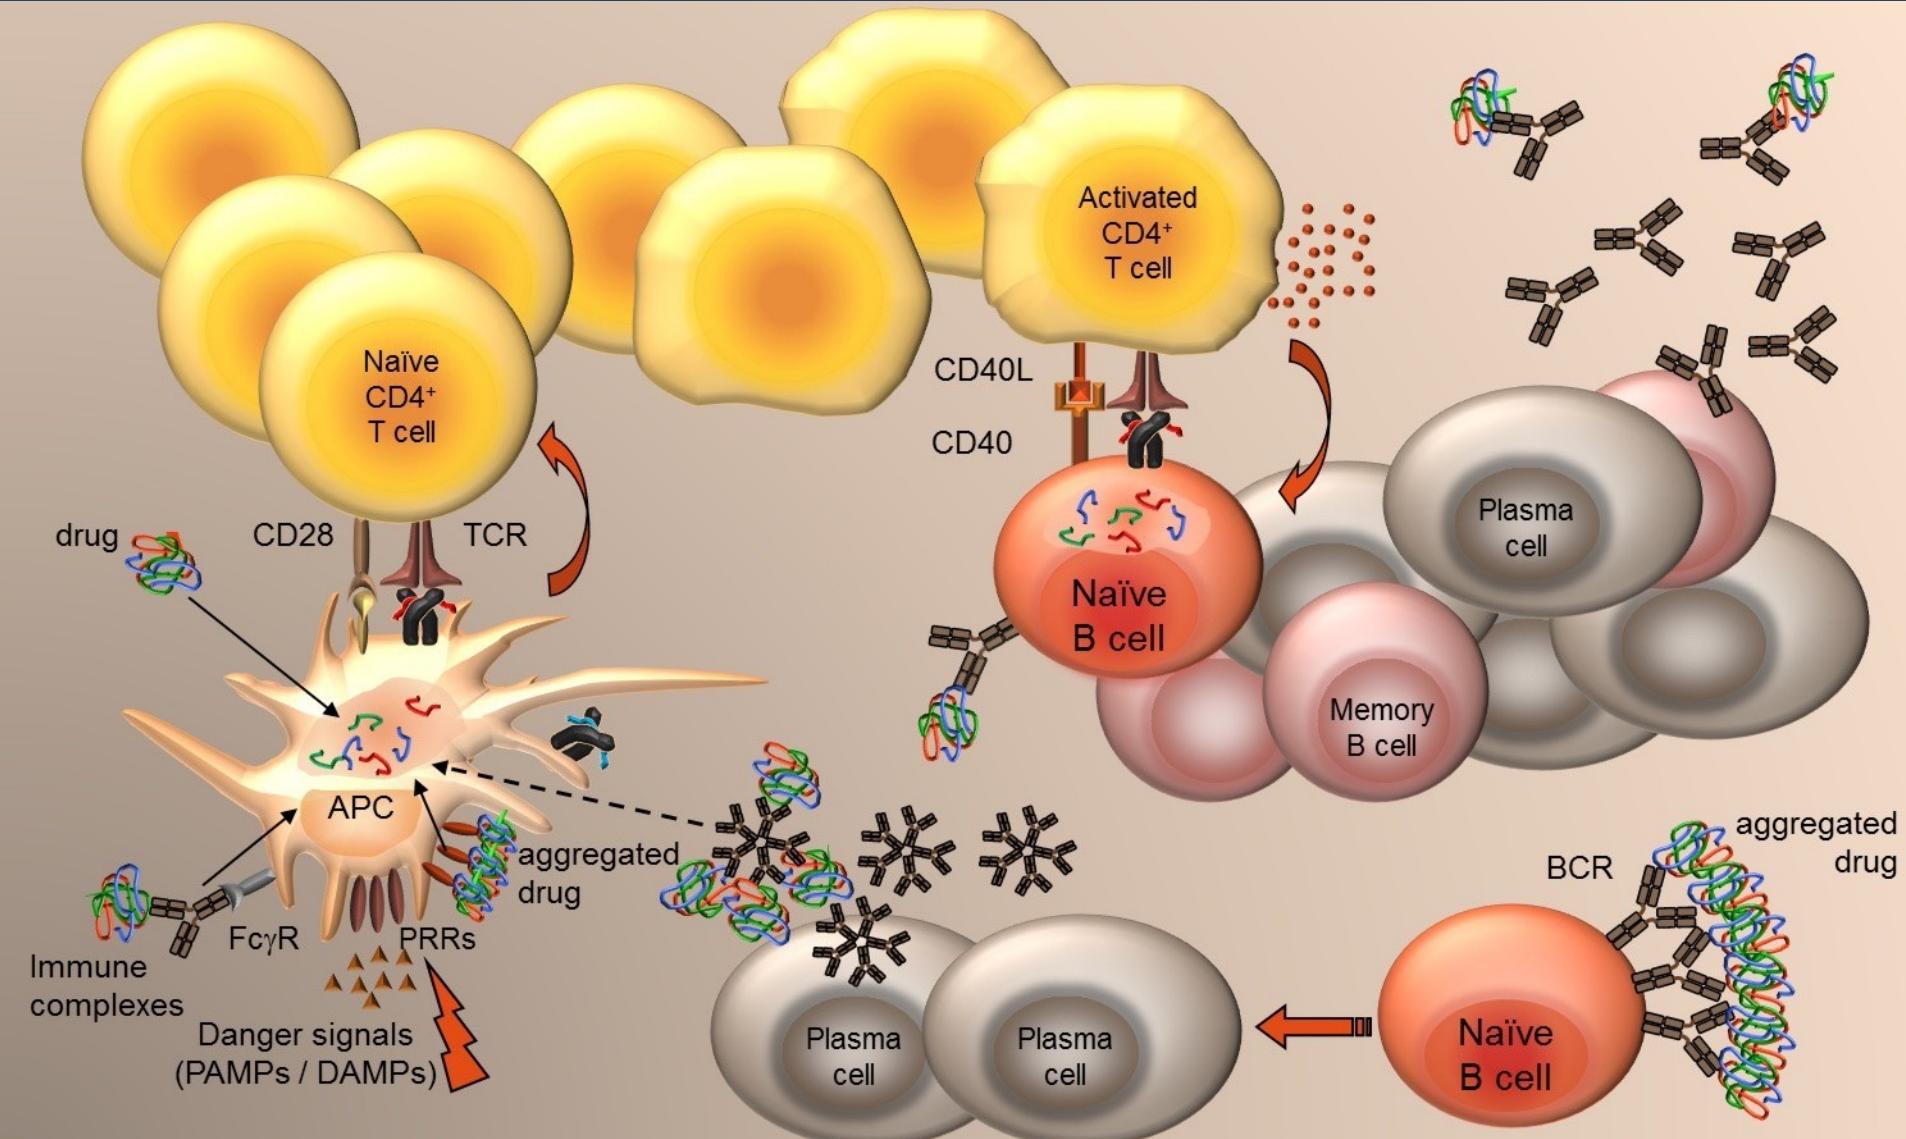

- Proteine grandi e complesse
- Presenza di xenoantigeni or process-related impurità
- Presenza di allotipi
- Presenza di idiotipo (mAbs)
- Neoantigeni nei siti di giunzione
- Siti di glicosilazione
- Formazione di aggregati

Tutti i farmaci biologici sono immunogenici

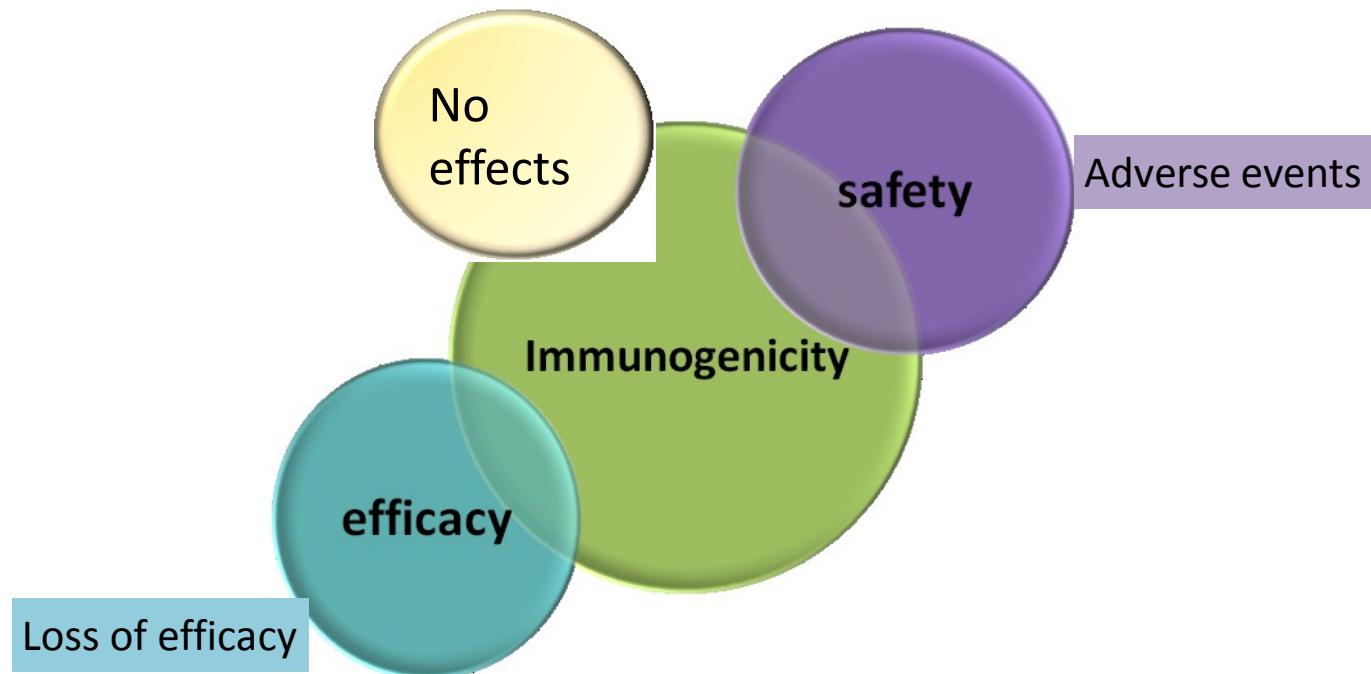

# La risposta immune anti-farmaco biologico

# Perché siamo interessati all'immunogenicità?

L'immunogenicità porta allo sviluppo di anticorpi anti-farmaco (ADA) che possono avere due importanti conseguenze cliniche

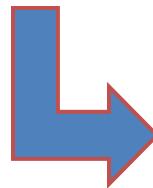

# Immunogenicità come causa di perdita di efficacia dei farmaci biologici

1. Anticorpi neutralizzanti: che prevengono l'azione del farmaco

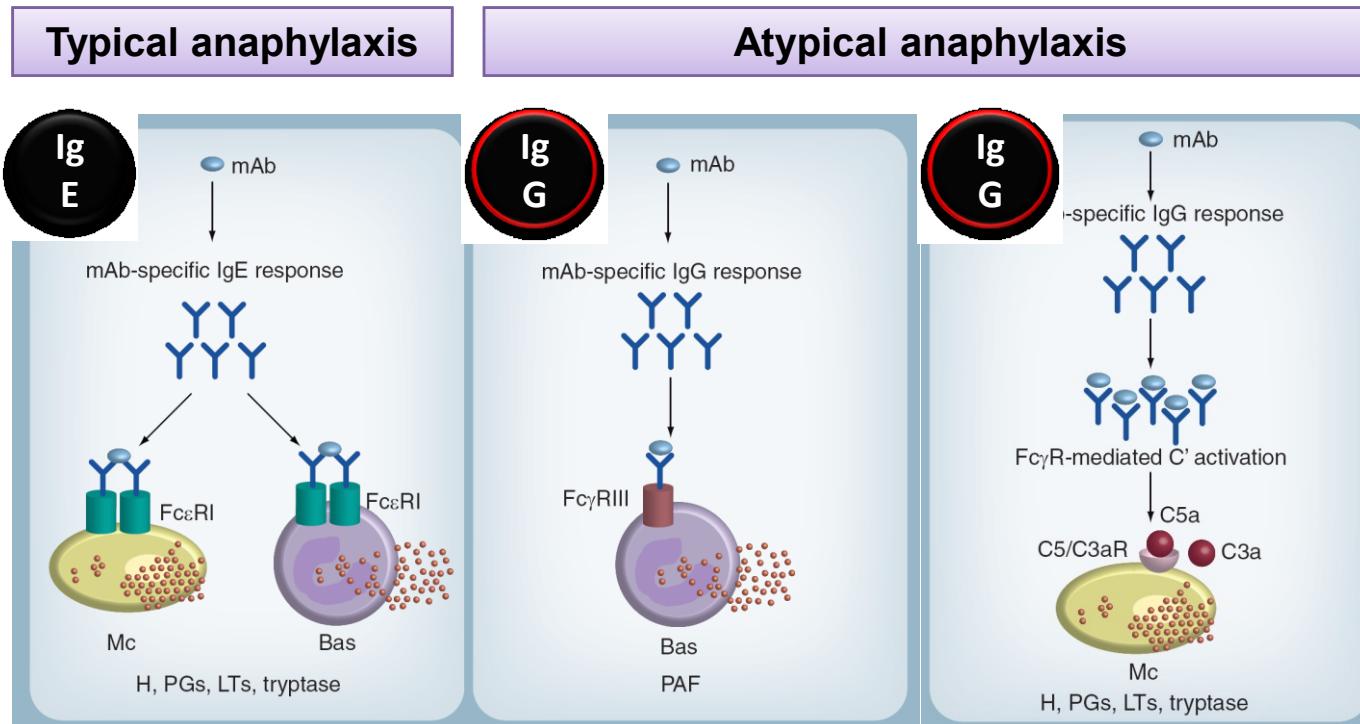

Farmaco biologicamente inattivo

2. Anticorpi cliranti: che incrementano la PK del farmaco

Farmaco metabolizzante più velocemente

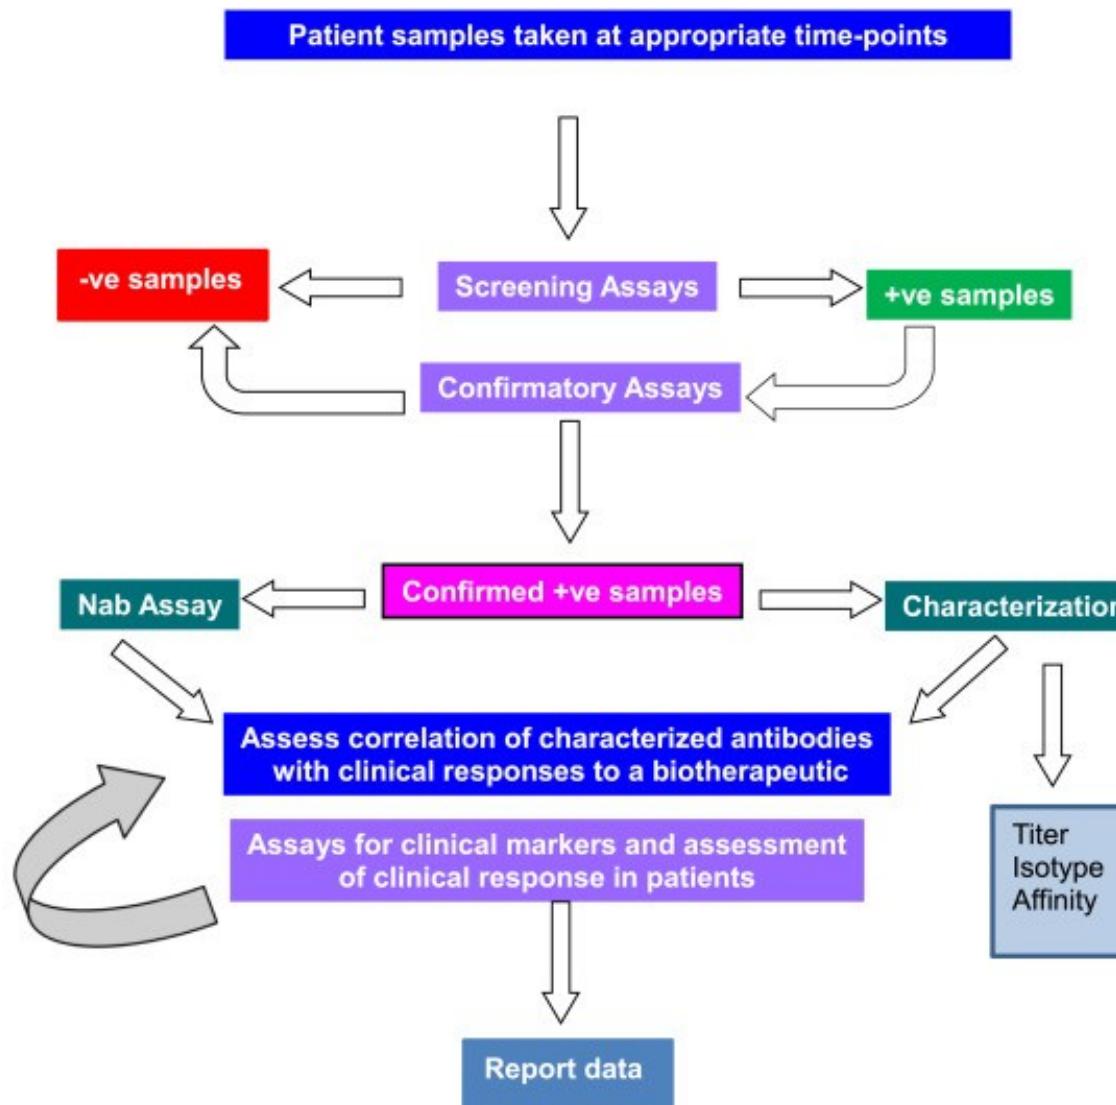

# Anafilassi tipica ed atipica indotta da anticorpi anti-farmaco biologico

Maggi E, Vultaggio A, Matucci A  
Exp Rev Clin Immunol 2011

# Il ruolo del laboratorio

# Strategia per la detezione degli anticorpi ADA

# Detezione degli ADAs : metodi correnti

- Immunochemical methods

- Binding assays (ELISAs, RIA, elettrochemiluminesce)

- Biophysical methods

- Surface plasmon resonance

- Bioassays

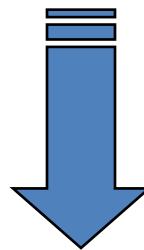

***Ciascun metodo ha i suoi vantaggi ed i suoi limiti***

**pros**

**Cons**

# Comparison of different techniques to monitor anti-drug antibodies

- Infliximab-treated patients
- BID patients (Crohn disease)
- Commercial ELISA, RIA, bridging  
ELISA home made

**Performances of assays are comparable.**

However, anti-IFX Ab titers show **systematic differences**,  
and in individual patients, **only the same assay should be used.**

Problems may arise when different assays  
are used to manage therapies in the same patient.

# Testing for drug bioavailability and immunogenicity

Infliximab  
Adalimumab  
Etanercept  
Certolizumab pegol  
Golimumab  
Rituximab  
Tocilizumab  
Bevacizumab  
Trastuzumab  
Ustekinumab

Abatacept  
Natalizumab  
Mepolizumab  
Cetuximab  
Belimumab  
.....

Home made  
assay

# IgE ADAs isotype: type of assay

IgE-mediated reactions have been described towards several BPs by different assays

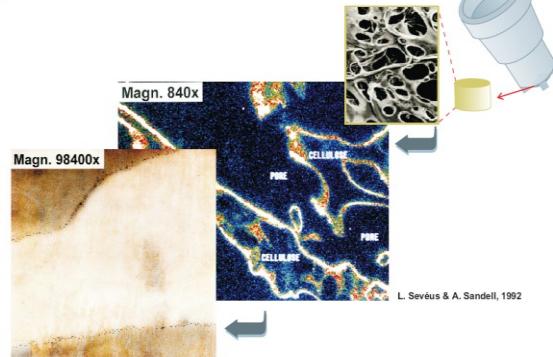

| Drug        | In vitro       | Ref                           |
|-------------|----------------|-------------------------------|
| Muromonab   | Yes, ELISA     | Georgitis, 1991               |
| Cetuximab   | Yes, ImmunoCAP | Chung, 2008                   |
| Tocilizumab | Yes, ImmunoCAP | Stubenrauch, 2010             |
| Basiliximab | Yes, ELISA     | Baudouin , 2003               |
| Natalizumab | Yes, ImmunoCAP | MunozCano, 2010               |
| Infliximab  | Yes, ImmunoCAP | Vultaggio, 2010, Matucci 2013 |
| Rituximab   | Yes, ImmunoCAP | Vultaggio, 2012               |

# IgE ADAs isotype

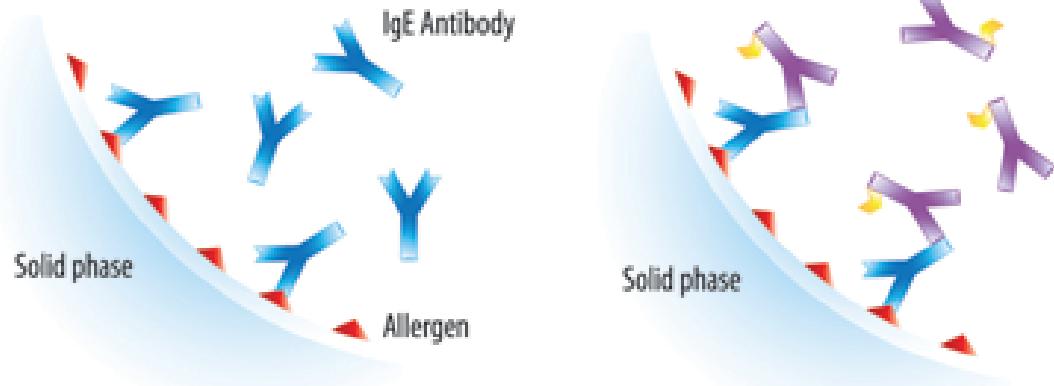

The Design

ImmunoCAP Technology

Solid phase: ImmunoCAP

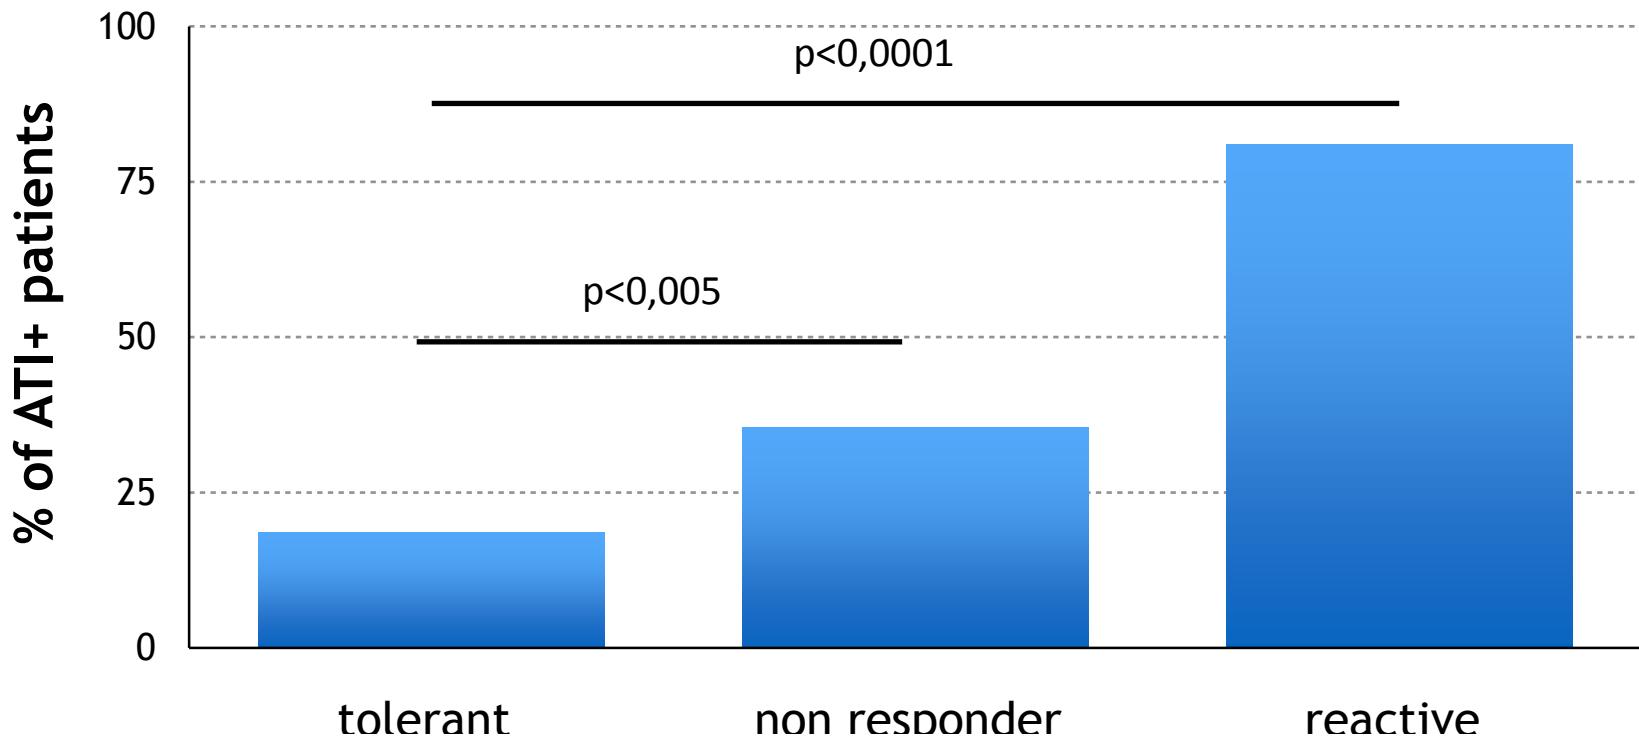

enzyme-labelled antibody against IgE

In the **ImmunoCAP system**, the allergen is covalently bound to a solid phase consisting of an activated hydrophilic polymer. The secondary IgE antibodies are bound to the enzyme  $\beta$ -galactosidase, which transforms added methylumbelliferyl- $\beta$ -D-galactoside into a fluorescent product (4-methylumbelliferone). The fluorescence intensity depends on the concentration of the product and correlates with the IgE bound to the allergen.

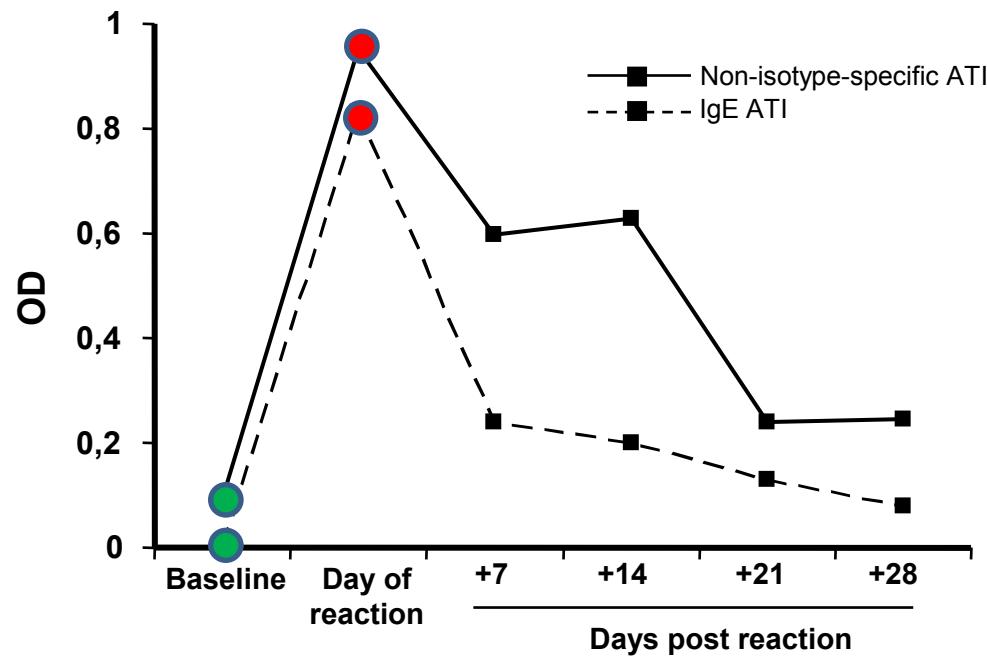

## 346 Infliximab-treated patients

Tolerant n=200  
Non responder n=93  
Reactive n=53

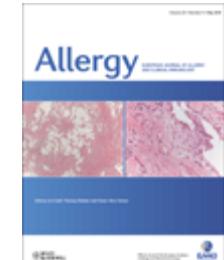

# Benefits from immunogenicity evaluation

## 1) Predict the risk of hypersensitivity reactions?

Hypersensitivity risk can be detected prior to clinical symptoms !!

# Benefits from immunogenicity evaluation

## 2) Predict the clinical response?

### Anti-drug antibodies

ORIGINAL ARTICLE

The relationship between infliximab concentrations, antibodies to infliximab and disease activity in Crohn's disease

Niels Vande Castele,<sup>1,2,3</sup> Reena Khanna,<sup>3</sup> Barrett G Levesque,<sup>2,3</sup> Larry Stitt,<sup>3</sup> G Y Zou,<sup>3</sup> Sharat Singh,<sup>4</sup> Steve Lockton,<sup>4</sup> Scott Hauenstein,<sup>4</sup> Linda Ohrmund,<sup>4</sup> Gordon R Greenberg,<sup>5</sup> Paul J Rutgeerts,<sup>6</sup> Ann Gils,<sup>1</sup> William J Sandborn,<sup>2</sup> Séverine Vermeire,<sup>6</sup> Brian G Feagan<sup>3</sup>

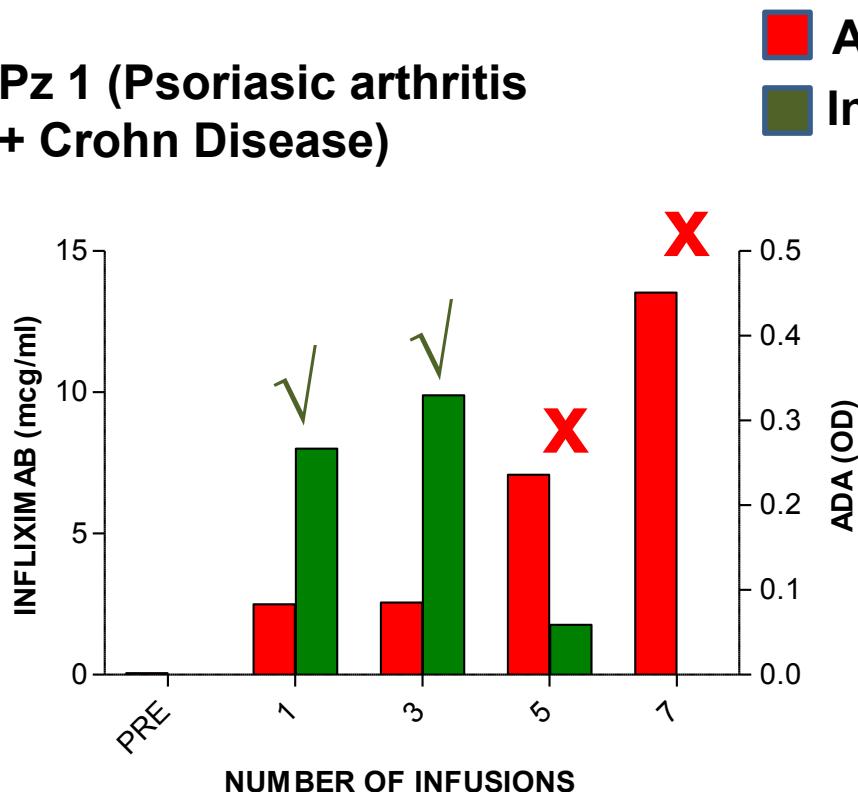

454 patients

ATI (anti-infliximab antibodies) presence in “current” sample is a independent predictor for the presence of C-Reactive Protein >5 mg/L (surrogate of disease activity) in a “future” sample ( $p<0.006$ )

$\Delta$  time between “current” and “future” sample:  $56 \pm 14$  days

# Our experience in longitudinal evaluation of patients

Pz 1 (Psoriatic arthritis + Crohn Disease)

Pz 2 (Rheumatoid Arthritis)
